Clustering and Fitting (40%)

- Due Thursday by 12:00
- Points 40
- · Submitting a file upload
- · File types pdf
- Available 22 Mar at 14:00 30 Apr at 12:00

Weighting %:	40	Submission deadline (for students):	25/4/24 at 12pm (Midday)
Authorship:	Individual	Target date for returning marked coursework:	17/5/24
Tutor setting the work:	Dr. William Cooper	Number of hours you are expected to work on this assignment:	20

This Assignment assesses the following module Learning Outcomes (from Definitive Module Document):

- 1. Be able to maintain and develop code using the git version control system.
- 2. Be able to apply different techniques for cleaning data and preparing it for analysis.
- 3. Be able to design and implement algorithms for clustering, classification and regression problems.
- 4. Be able to communicate their findings to others, including a critical assessment of performance.
- 5. Demonstrate knowledge and understanding of the concepts of version control for code development.
- 6. Demonstrate knowledge and understanding of key data manipulation techniques for data preparation.
- 7. Understand how to approach a range of different data science problems to obtain an efficient solution.

Assignment Tasks:

You will create a well-written report performing clustering and fitting within a dataset. You can download any dataset from Kaggle/Worldbank/etc. Be sure to include your name, student number and a link to your GitHub repository in the report. There will be at least four plots: a histogram/bar chart/pie chart; a line/scatter graph; a confusion matrix/heatmap/corner/box/violin plot; an elbow/silhouette plot. The code will contain evidence of the creation of any displayed graphs (one graph per function) and the creation of any shown clustering/fitting technique. The minimum expected techniques will be that of k-means clustering and line fitting.

This will build on the statistics and trends assignment into a full report as would be produced by a professional data scientist. However, do **not** use the same report/dataset as previously (this will be checked), as self-plagarism is still academic misconduct.

Submission Requirements:

A three page PDF report, including a functional link to your GitHub repository containing your python code (either notebooks or plain python). Check that your repository link is both clickable and links to a **public** repository.

Marks awarded for:

See rubric.

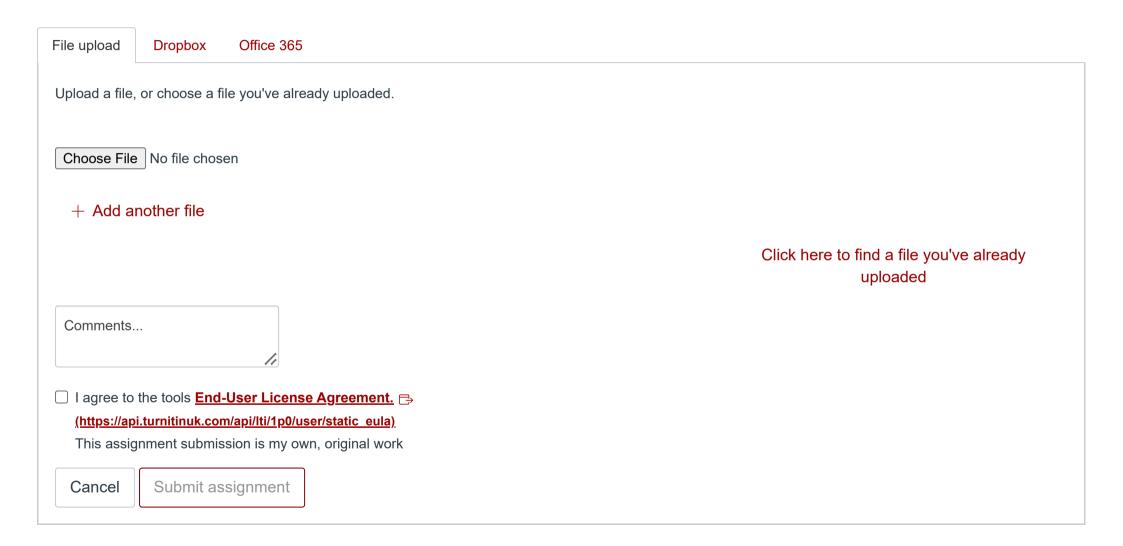

Type of Feedback to be given for this assignment:

Written feedback within the rubric.

Additional information:

- Regulations governing assessment offences including Plagiarism and Collusion are available from
 https://www.herts.ac.uk/ data/assets/pdf_file/0007/237625/AS14-Apx3-Academic-Misconduct.pdf
 (https://www.herts.ac.uk/
 data/assets/pdf_file/0007/237625/AS14-Apx3-Academic-Misconduct.pdf
 (UPR AS14)
- Guidance on avoiding plagiarism can be found here: https://herts.instructure.com/courses/61421 (https://herts.instructure.com/courses/61421) (see the Referencing section)
- For postgraduate modules:
 - a score of 50% or above represents a pass mark.

o late submission of any item of coursework for each day or part thereof (or for hard copy submission only, working day or part thereof) for up to five days after the published deadline, coursework relating to modules at Level 7 submitted late (including deferred coursework, but with the exception of referred coursework), will have the numeric grade reduced by 10 grade points until or unless the numeric grade reaches or is 50. Where the numeric grade awarded for the assessment is less than 50, no lateness penalty will be applied.

Assignment 2: Clustering and Fitting

Criteria				Ratings					Pts
Relational Graph Quality The quality of the relational graph, e.g. line/scatter graph.	, ,	an xy relation. The axes able without effort and the	1 Pts Fair quality The graph will conv be too small to read overcrowding of the	s marks sing graph or sing axes ls.	2 pts				
Categorical Graph Quality The quality of the categorical graph, e.g. bar chart/histogram/pie chart.	2 Pts Full marks The graph will compare multiple categories. The axes labels will be fully readable without effort and the appearance will be clear.			1 Pts Fair quality The graph will compare multiple categories. The axes labels may be too small to read comfortably. There may be an overcrowding of the figure.					2 pts
Statistical Graph Quality The quality of the statistical graph, e.g. heatmap/confusion matrix/corner plot/violin/box plot.	2 Pts Full marks The graph will communicate a statistical relation. The axes labels will be fully readable without effort and the appearance will be clear.			axes labels may l	mmunicate a statistical re be too small to read com rowding of the figure.		Mis	Pts marks esing graph or esing axes els.	2 pts
Quality of Analysis How accurate and meaningful the data analysis is.	5 Pts Full marks The explanation is clear and coherent. Statistics are used to	4 Pts Very high marks The explanation is clear and coherent. Statistics are used to	The	ts h marks e explanation is stly clear and erent.
